

1. Executive summary

Battery-electric vehicle (BEV) sales grew from roughly 2.1 million units in 2019 to an estimated 9.5 million units in 2024, driven by China and Europe.

2. Key findings

- China accounts for the largest single-market volume across the period.
- European BEV market share passed 15 percent of new sales in 2023.
- North American adoption lags Europe by roughly two years.

3. Outlook

Analysts project continued double-digit growth through 2026, constrained mainly by charging-infrastructure rollout and battery-material supply.
